by R. T. Gunther, 830; Prof. S. S. Bhatnagar and Dr. K. N. Mathur's Physical Principles and Applications of Magnetochemistry, 831; M. N. Saha and B. N. Srivastava's A Treatise on Heat, 1029; Dr. Harold Jeffreys's Earthquakes and Mountains, 1030; Some Problems of Modern Meteorology: published by the Royal Meteorological Society, 1031; L. Pauling and E. B. Wilson's Introduction to Quantum Mechanics, 1144; Prof. C. J. Keyser's Mathematics and the Question of the Cosmic Mind, 1145.

Bose (Akshayananda), magnetic susceptibilities of organic substances in different physical states, 1119.

Bourgin (Dr. D. G.), interference calculations and wave groups, 1033.

Brindley (Dr. G. W.), the atomic scattering factors of aluminium, nickel, and copper for CuKα radiation and their relation to the theory of X-ray dispersion, 778; an X-ray investigation of atomic vibrations in zinc, 790.

Cadmium single-crystals, the plastic deformation of, 399.

Cæsium-oxygen films on tungsten, 1131.

Calcite, the surface structure of polished cleavage faces of, 820.

Carbon dioxide, the thermal conductivity of, 508.

—— tetrachloride and chloroform, on the determination of the dielectric constants at radio frequencies, 1.

Catalytic combustion of methane.—Part I., 513.

Characteristic curve of the photographic plate, 1113.

Chitty (L.) and Pippard (A. J. S.), the stresses in a disk wheel under loads applied to the rim, 106.

Chlorobenzene and ethylene dichloride, on the determination of the dielectric constants of organic liquids at radio frequencies, 1008.

Circular disk in viscous liquid, application of Bessel functions to the solution of problem of motion of, 546.

Cleavage faces of calcite, the surface structure of polished, 820.

Cleveland (Forrest F.), magnetic forces in a rectangular circuit, 416.

Coles (V. R.), the numerical solution of an integral equation, 760.

Colour vision and colour measurement, variations in, 505.

Colwell (Prof. R. C.), concealed systems and relativity, 976.

Combridge (J. T.), Gauss's theorem in general relativity—a correction, 708.

Concealed systems and relativity, 976.

Conductivities, electrical and acoustic, of cylindrical tubes bounded by infinite flanges, 128.

Confluent hypergeometric functions and their integrals, on operational representations of, 1082.

Contour integration, fractional, 274.

Cooper (Dr. Ralph) and Todd (John), the large roots of $\cos z = az + c$, 249.

Costello (J. C.), Bessel product functions, 308; note on the bending of rectangular plates, 1005.

Crystals, optical constants, a method for determining and examples of its application to certain organic compounds, 321.

Curran (Samuel C.), an apparent regularity in β-ray reflexion, 406.

Cylindrical conductor electrically heated *in vacuo*, the distribution of temperature in, 641.

—— tubes bounded by infinite flanges, on the electrical and acoustic conductivities of, 128.

David (Prof. W. T.), temperature and latent energy in flame gases, 280.

Davies (R. M.) on the determination of the dielectric constants of organic liquids at radio-frequencies. — Part I. Carbon tetrachloride and chloroform, 1; Part II. Chlorobenzene and ethylene dichloride, 1008.

Davies (Dr. W.), the catalytic combustion of methane.—Part I., 513.

Davison (B.) on the steady two-dimensional motion of groundwater with a free surface, 881; on the steady motion of groundwater through a wide prismatic dam, 904.

Dean (W. R.), note on the slow motion of fluid, 727.
Debye's theory of polar molecules, the application to solid dielectrics, 369.
Deming (A. F.) and Stowell (E. Z.), the dual nature of modulation, 947.
Dhar (Prof. S. C.) on operational representations of confluent hypergeometric functions and their integrals, 1082.
Dielectric constants of organic liquids at radio frequencies, on the determination of.—Part I. Carbon tetrachloride and chloroform, 1; Part II. Chlorobenzene and ethylene dichloride, 1008.
Dielectrics, solid, the application of Debye's theory of polar molecules to, 369.
Differential equations, a method of, numerical solution of, 624.
—— ——, linear, asymptotic solutions of, 544.
iffraction, on a fundamental problem in, 734.
Dipoles, the rotation of, in elastic and viscous media, 226.
Discharge-tubes, polarization effect in, 1057.
Disk wheel under loads applied to the rim, the stresses in, 106.
Dispersion, magnetic rotatory, of water, photographic measurements of, 164.
Dissociation of some molecules with free valencies, 41.
Earth resistance from surface potential measurements, on the theoretical determination of: correction, 829.
Elasticity of materials for small stresses, modulus of, 65.
Electro-magnetic inertial ellipsoid associated with the windings of electrical machinery, 299.
—— waves from a point source, 384.
Electrostatic energy, a suggestion regarding, 337.
Evans (Dr. R. H.) and Wood (R. H.), modulus of elasticity of materials for small stresses, 65.
Fabian (Dr. W.), fractional calculus: fractional contour integration, 274.
Factorial moments, the use of, in the treatment of the hypergeometric distribution and in tests for regression, 215.
Fage (A.), turbulent flow in a circular pipe, 80.
Falkner (V. M.), a method of numerical solution of differential equations, 624.
Flame gases, temperature and latent energy in, 280.
Flat plate problem of skin friction and heat transfer, a simple solution of, 995.
Fourier synthesis, numerical and mechanical methods in, 176.
Fractional calculus: fractional contour integration, 274.
Free electron specific heat, the temperature dependence of, 145.
Friend (R. G.) and Warren (A. G.) on the effect of a magnetomotive force applied for a short time to a steel cylinder, 980.
Ganguli (N.), magnetic studies on graphite and graphitic oxides, 355.
Gauss's theorem in general relativity: a correction, 708.
Generalization of the Lorentz transformation, 1111.
Generalized plane stress, on the notion of, 201.
Glow discharge through oxygen, 659.
Gold- and silver-leaf, the effect of heat treatment on the structure of, 713.
Gonin (Dr. H. T.), the use of factorial moments in the treatment of the hypergeometric distribution and in tests for regression, 215.
Graphite and graphitic oxides, magnetic studies on, 355.
Gravitation and light, 564.
Green (Dr. G.), ring and disk Sources, 922; on a fundamental problem in diffraction, 934.
Greeves (F. D.) and Johnston (J. E. McF.), the glow discharge through oxygen, 659.
Ground-water through a wide prismatic dam, on the steady motion of, 904.
—— with a free surface, on the steady two-dimensional motion of, 881.
Hanoen (E. T.), probability in wave mechanics, 572.
Harding (J.), the absorption of monochromatic light in iodine vapour, 773.

Healey (R. H.), the influence of the radiation field from an electrical storm on the ionization density of the ionosphere, 187.
Heat transfer and skin friction, a simple solution of the flat plate problem of, 995.
—— treatment, the effect of, on the structure of gold- and silver-leaf, 713.
Henry constant of ions, on the theoretical calculation of the, 958.
Hopkins (H. G.), the surface structure of polished cleavage faces of calcite, 820.
Houstoun (Dr. R. A.), variations in colour vision and colour measurement, 505; the characteristic curve of the photographic plate, 1113.
Howell (W. T.), electromagnetic waves from a point source, 384.
Hume-Rothery conception of the metallic state, 291.
Hypergeometric distribution, the use of factorial moments in the treatment of the, 215.
Ibbs (T. L.), the thermal conductivity of carbon dioxide, 508.
Impact, photo-elastic study of stresses due to ,448.
Ingram (W. H.) on an electromagnetic inertial ellipsoid associated with the windings of electrical machinery, 299.
Integral equation, numerical solution of, 760.
Integrals involving Bessel and Struve functions, 437.
Interference calculations and wave groups, 1033.
Iodine vapour, the absorption of monochromatic light in, 773.
Ionization density of the ionosphere, the influence of the radiation field from an electrical storm, 187.
Ions, on the theoretical calculation of the Henry constant of, 958.
Jeffreys (Dr. Harold), asymptotic solutions of linear differential equations, 544.
Johnston (J. E. McF.) and Greeves (F. D.), the glow discharge through oxygen, 659.
Jones (Prof. E. Taylor) on the mutual energy in systems of vibrating particles and a suggestion regarding electrostatic energy, 337.
K-series of aluminium, sulphur, and chlorine, wave-length measurements in, 501.
Kar (Prof. K. C.), the spontaneous and artificial transmutations of atomic nuclei, 1067.
King (Prof. L. V.) on the electrical and acoustic conductivities of cylindrical tubes bounded by infinite flanges, 128.
Koizumi (Prof. S.), notes on the asymptotic evaluation of operational expressions, 265.
L-series of zinc, wave-length measurements in, 501.
Lamé's equation and generalized Lamé's functions, 991.
Larmor (Sir Joseph), optical relativity as tested by rotational quality, 160.
Lees (Dr. J. H.), cæsium-oxygen films on tungsten, 1131.
Legendre function formulæ, derived from Bessel function formulæ, 697.
Lessheim (H.) and Samuel (R.), on the dissociation of some molecules with free valencies, 41.
Light and gravitation, 564.
Lorentz transformation, a generalization of, 1111.
McLachlan (Dr. N. W.) and Meyers (A. L.), the ster and stei functions, 425; integrals involving Bessel and Struve functions, 437.
MacRobert (Prof. R. M.), derivation of Legendre function formulæ from Bessel function formulæ, 697.
Magnetic forces in a rectangular circuit, 416.
—— rotatory dispersion of water, photographic measurements of, 164.
—— studies on graphite and graphitic oxides, 355.
—— susceptibility of single crystals, of lead, thallium, and tin, 609.
—— susceptibilities of organic substances in different physical states, 1119.
Magnetomotive force applied for a short time to a steel cylinder, on the effect of, 980.
Maitra (A. T.) and Bandopadhyaya (Prof. G. B.), absorption of soft X-rays in aluminium, 869.
Maunsell (Dr. F. G.), stresses in a notched plate under tension, 765.

Maxwell effect in liquids, 1125.
Mendelssohn (Dr. K.) and Moore (Miss J. R.), experiments on supraconductive tantalum, 532.
Metallic state, on the Hume-Rothery conception of the, 291.
Metals, on the theoretical calculation of the normal potential of, 958.
Methane, catalytic combustion of.—Part I., 513.
Meyers (A. L.) and McLachlan (Dr. N. W.), the ster and stei functions, 425: integrals involving Bessel and Struve functions, 437.
Modulation, the dual nature of, 947.
Modulus of elasticity of materials for small stresses, 65.
Molecules with free valencies, on the dissociation of, 41.
Moore (Miss J. R.) and Mendelssohn (Dr. K.), experiments on supraconductive tantalum, 532.
Mutual energy in systems of vibrating particles, and a suggestion regarding electrostatic energy 337.
Natural frequencies of torsionally vibrating systems, effect of changes in, 1097.
Nickel, X-ray measurement of the thermal expansion of pure, 809.
Nisida (Masataka) and Tuzi (Dr. Z.), photo-elastic study of stresses due to impact, 448.
Niven (Dr. C. D.) on the Hume-Rothery conception of the metallic state, 291.
Normal potential of metals and Henry constant of ions, on the theoretical calculation of, 958.
Notched plate under tension, stresses in a, 765.
Numerical and mechanical methods in double Fourier synthesis, 176.
—— solution of differential equations, 624.
—— —— of an integral equation, 760.
O'Kane (Dr. B. J.), the application of Debye's theory of polar molecules to solid dielectrics, 369.
Operational expressions, notes on the asymptotic evaluation of, 265.
—— representations of confluent hypergeometric functions and their integrals, 1082.
Optical constants of crystals, a method for determining, and examples of its application to certain organic compounds, 321.
—— relativity as tested by rotational quality.
Owen (Prof. E. A.) and Yates (Dr. E. L.), X-ray measurement of the thermal expansion of pure nickel, 809.
Oxidation of metals, studies on the.—Part III. The kinetics of the oxidation of molten tin, 686.
Paldhikar (G. G.), Maxwell effect in liquids, 1125.
Photographic plate, the characteristic curve of, 1113.
Pierce (I. T.) and Roberts (Dr. R. W.), photographic measurements of the magnetic rotatory dispersion of water, 164.
Piercy (Dr. N. A. V.) and Preston (J. H.), a simple solution of the flat plate problem of skin friction and heat transfer, 995.
Pippard (A. J. S.) and Chitty (L.), the stresses in a disk wheel under loads applied to the rim, 106.
Plane stress, generalized, on the notion of, 201.
Plastic deformation of cadmium single-crystals, 399.
Plates, note on the bending of rectangular, 1005.
Polarization effect in discharge-tubes, 1057.
Porter (Prof. Alfred), the calculation of surface tension from experiment, 703.
Preston (G. D.) and Bircumshaw (Dr. L. L.), studies on the oxidation of metals.—Part III. The kinetics of the oxidation of molten tin, 686; the effect of heat treatment on the structure of gold- and silver-leaf, 713.
Preston (J. H.) and Piercy (Dr. N. A. V.), a simple solution of the flat plate problem of skin friction and heat transfer, 995.
Probability in wave mechanics, 572.
Rao (Dr. S. R.) and Subramaniam (K. C.), magnetic susceptibility of single crystals of lead, thallium, and tin, 609.
Ray (Manohar), application of Bessel functions to the solution of problem of motion of a circular disk in viscous liquid, 546.

Regression, tests for, the use of factorial moments in, 215.
Relativity and concealed systems, 976.
Reversible electrode equilibria, the physical significance of activity coefficients in, 1140.
Ring and disk sources, 922.
Roberts (Dr. R. W.) and Pierce (I. T.), photographic measurements of the magnetic rotatory dispersion of water, 164.
Robertson (Dr. D.), the subsidiary whirling of rotors due to speed oscillation, 474.
Robertson (Dr. J. Monteath), numerical and mechanical methods in double Fourier synthesis, 176.
Rods, on the transverse vibrations of long, 283.
Roots of $\cos z = az+c$, 249.
Roscoe (R.), the plastic deformation of cadmium single-crystals, 399.
Rotation of dipoles in elastic and viscous media, 226.
Rotors, subsidiary whirling of, due to speed oscillation, 474.
Samuel (R.) and Lessheim (H.) on the dissociation of some molecules with free valencies, 41.
Sastry (K. V.), a generalization of the Lorentz transformation, 1111.
Sharma (J. L.) on Lamé's equation and generalized Lamé's functions, 991.
Shearer (J.), wave-length measurements in the K-series of aluminium, sulphur, and chlorine and in the L-series of zinc, 501.
Skin friction and heat transfer, a simple solution of the flat plate problem of, 995.
Slow motion of fluid, note on the, 727.
Southwell (Prof. R. V.) on the notion of generalized plane stress, 201.
Specific heat, the temperature dependence of free electron, 145.
Square plate clamped at four edges, the transverse vibration of a, 745.
Ster and stei functions, 425.
Stevenson (Dr. A. F.), correction of paper, "on the theoretical determination of earth resistance from surface potential measurements," 829.
Stewardson (Dr. E. A.) on the pressure dependence of unimolecular reactions, 233.
Stoner (Dr. E. C.), the temperature dependence of free electron specific heat, 145.
Stowell (E. Z.) and Deming (A. F.), the dual nature of modulation, 947.
Stresses due to impact, photoelastic study of, 448.
—— in a disk wheel under loads applied to the rim, 106.
—— in a notched plate under tension, 765.
Subramaniam (K. C.) and Rao (Dr. S. R.), magnetic susceptibility of single crystals of lead, thallium, and tin, 609.
Supraconductive tantalum, experiments on, 532.
Surface tension, the calculation of, from experiment, 703.
Tantalum, experiments on supraconductive, 532.
Tavani (F.), light and gravitation, 564.
Thermal conductivity of carbon dioxide, 508.
—— expansion of pure nickel, X-ray measurement of the, 809.
Thomson (Dr. John), a new polarization effect in discharge-tubes, 1057.
Todd (John) and Cooper (Dr. Ralph), the large roots of $\cos z = az+c$, 249.
Tomotika (Dr. S.), the transverse vibration of a square plate clamped at four edges, 745.
Torsionally vibrating systems, the effect of changes on the natural frequencies, 1097.
Transient phenomena in systems with similar frequency characteristics, some relations between, 833.
Transmutations, the spontaneous and artificial, of atomic nuclei, 1067.
Transverse vibration of a square plate clamped at four edges, 745.
—— vibrations of long rods, 238.
Tungsten, cæsium-oxygen films on, 1131.
Tuplin (W. A.), the effect of changes in a torsionally vibrating system on the natural frequencies of the system, 1097.
Turbulent flow in a circular pipe, 80.

Tuzi (Dr. Z.) and Nisida (Masataka), photo-elastic study of stresses due to impact, 448.
Uhara (Prof. Iturô) on the theoretical calculation of normal potential of metals and Henry constant of ions, 958.
Unimolecular reactions, on the pressure dependence of, 233.
Vibrating particles, systems of, the mutual energy in and a suggestion regarding electrostatic energy, 337.
Walke (H. J.), the atomic weight of element 93, 262.
Warren (A. G.) and Friend (R. G.), on the effect of a magnetomotive force applied for a short time to a steel cylinder, 980.
Wave groups and interference calculations, 1033.
—— length measurements in the K-series of aluminium, sulphur, and chlorine and in the L-series of zinc, 501.
—— mechanics, probability in, 572.
Whirling of rotors due to speed oscillation, 474.
Wood (R. G.) and Ayliffe (Dr. S. H.), a method for determining the optical constants of crystals and examples of its application to certain organic compounds, 321.
Wood (R. H.) and Evans (Dr. R. H.), modulus of elasticity of materials for small stresses, 65.
Woodmansey (A. Colin), atomic weights by calculation, 1079.
X-ray dispersion, the theory of, 778.
—— investigation of atomic vibrations in zinc, 790.
—— measurement of the thermal expansion of pure nickel, 809.
Yates (Dr. E. L.) and Owen (Prof. E. A.), X-ray measurement of the thermal expansion of pure nickel, 809.
Yates-Fish (Dr. N. L.) on the rotation of dipoles in elastic and viscous media, 226.
Zinc, an X-ray investigation of atomic vibrations in, 790.
